

Trust and Knowledge in Business Computing

Dr.K.Chandra Sekaran
DoMS, IIT Madras.

Abstract: Trust and Knowledge have emerged as important key challenges for the collaborative and distributed computing environment which otherwise would change the entire computing scenario in the presence of several security concerns that are present in today's world. This keynote analyses the approaches that the researchers have taken up in these two domains so far and argues that an interdisciplinary and multi-model approach in the understanding and usage of Trust and Knowledge concepts are needed in Computing and Informatics related to Business.
